REVISION TEST

3

Name of the Student: _____

Time: 3 hours

Class : 10th

Sub: Biology

Sec: Lyra, Polaris, Nova

Marks: 50

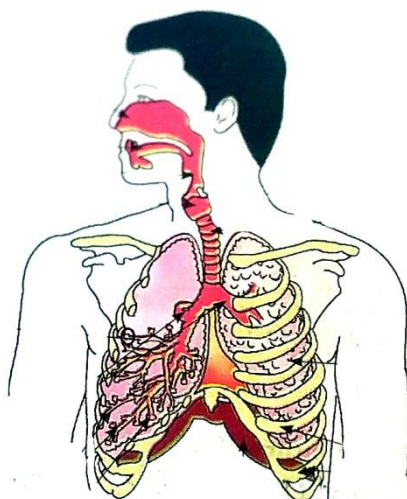

Section - I

I. Answer all the following questions.

6 x 1 = 6m

Each question carries **ONE** mark.

1. Which are do not show any molecular movement in them until they infect some cell?
2. _____ is more soluble in water than oxygen.
3. Which structure of below help in increasing and decreasing chest cavity?

4. What are peristaltic movements?
5. What happen the stomatal pore if the guard cell swell?
6. What is the need for excretion?

Section - II

II. Answer all the following questions.

4 x 2 = 8m

Each question carries **TWO** marks.

7. What questions will you ask, if you have a chance to meet a gastroenterologist?
8. Read the paragraph.

Animals have evolved different organs for the uptake of oxygen from the environment and for getting rid of the carbon dioxide produced. Terrestrial animal can breathe the oxygen in the atmosphere, but animals that live in water need to use the oxygen dissolved in water.

Now, answer the following questions.

- I. Unlike plants, why animals need different organs for the uptake of O₂ and eliminate CO₂?
- II. Give an example of an organism that takes up dissolved oxygen.

9. How is the amount of urine produced regulated?

10. Ventricles have thicker muscle walls than the atria. Give reason.

Section - III

III. Answer all the following questions.

5 x 4 = 20m

Each question carries **FOUR** marks.

11. Write differences between single circulations & double circulation.

12.A. Draw a well labelled diagram of human alimentary canal.

(Or)

B. Draw a neat diagram of section view of human heart and label it.

13. How are fats digested in our bodies? Where does the process take place?

14. Sometimes we get muscle cramps when we perform muscular activity. Give reasons.

15. Read the table and answer the following questions.

Part of Nephron	Function
Glomerulus	Filters blood to form filtrate
Bow man's capsule	Collects the filtrate from the glomerulus.
Tubular part of nephron	Reabsorbs nutrients, ions, and water, secretes substances.
Collecting duct	Collects filtrate and eventually leads to ureter

Answer the following questions.

1. What structure in the nephron filters blood to form filtrate?

2. Which part of the nephron collects filtrate from the glomerulus?

3. Which nephron segment reabsorbs nutrients, ions, and water into the blood?

4. What is the function collecting duct?

Section - IV

IV. Answer all the following questions.

2 x 8 = 16m

Each question carries **EIGHT** marks.

Each question has an internal choice.

16. A. Prove that air we exhale during respiration contains more CO_2 .

(Or)

B. Write an experimental procedure to prove that photosynthesis occurs in green leaves only.

17.A. Describe the structure and function of nephron.

(Or)

B. Write an activity to prove leaves send their excess water through transpiration.
