100

REVISION TEST

3

Name of the Student: _____

Time: 3 hours Class : 10th

Sub: PHYSICAL SCIENCE

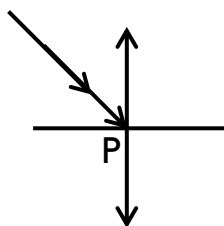

Sec: Nebula, Orion

Marks: 100

I. Answer all the following questions.

8 x 1 = 8m

1. Define accommodation of a lens?
2. Write the lens formula? Explain the terms scattering of light?
3. Define scattering of light?
4. Complete the diagram.

5. Write the formula of beaching power?
6. Draw the electron dot structure of CO_2 molecule?
7. What is the use of vinegar?
8. Name the sodium compound which is used for softening hard water?

II. Answer all the following questions.

3 x 2 = 6m

9.

Meterial	Refractive Indix
Water	1.33
Ice	1.31

- a. Which is deser medum.
- b. In which the light can tracell faster?

10. General formula of alkenes is C_nH_{2n} . Write the first three alkenes?

11. Fresh milk has a **pH** of 6. How do you think the **pH** will change as it turns into curd?

III. Answer all the following questions.

3 x 4 = 12m

12. i. Draw the Ray Diagram for following positions? To the convex lens?

- a. Object at "C"
- b. Object at "Between F and P"?

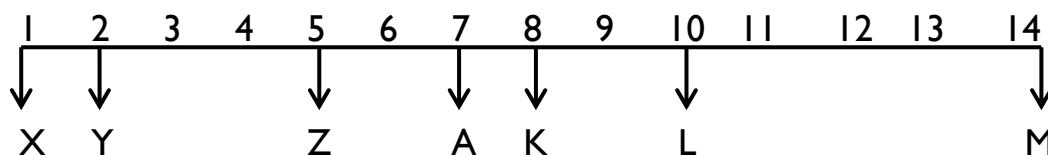

(Or)

ii. Draw diagram which shows the electrolytic refining of copper?

13. Draw the ray diagrams for the following position to the concave mirror?

- Object is beyond "C"
- Object is at "F"

14. pH scale.

- Which of these letters represent a strong acid?
- Out of **K**, **L** which is a strong base?
- Which of the letters represents a weak base?
- Which letter represents neutral?

IV. Answer all the following questions.

3 x 8 = 24m

15. A. Define myopia? And explain how do you correct this defect?

(Or)

B. Define Hypermetropia? And explain how do you correct this defeat?

16. A. Write the difference between displacement and double displacement reactions?

(Or)

B. Explain the following.

- Homologous series.
- Substitution reactions.

17. A. Define "What is the phenomena involved in prisam? And explain with an activity?"

(Or)

C. Write an activity to prove that more reactive metals displace the less reactive metals from their compounds.
