100**REVISION TEST****3**

Name of the Student: _____

Time: 3 hours Class : 10th

Sub: PHYSICAL SCIENCE

Sec: Polaris, B, Lyra

Marks: 100

I. Answer all the following questions.**8 x 1 = 8m**

1. Which substance is oxidised in the equation.

2. When a honey bee sting injects ethanoic acid, what is used to get relief from the pain?
3. Observe the table and answer the following questions.

Alkane	Methane	Ethan	Propane	Butane
Molecular formula	CH_4	C_2H_6	C_3H_8	C_4H_{10}

How many bonds are present in the propane?

4. Write an important ore of mercury and Iron?
5. What do you observe when lead nitrate powder is heated in a boiling tube?
6. Name a mirror which gives always virtual and diminished image.
7. What function of Cornea?
8. What is eye defect for a person who having focal length more than minimum normal focal length, which eye lens is used for correction.

II. Answer all the following questions.**3 x 2 = 6m**

9. Assume a test that can be used to differentiate between saturated and un saturated hydro carbons.
10. If your want to sec an enlarge image of your face, which type of mirror will you use & where will you need to place your face.
11. What is meant by scattering of light, by using this explain why sky is blue in colour.

III. Answer all the following questions.**3 x 4 = 12m**

12. i. Draw any one of the following diagram.

a. Draw a neat diagram which shows the action of steam on a metal.

(or)

Draw the following diagram & explain the nature of image formed:

- i. for convex mirror when object placed at 'F'
- ii. for convex mirror object placed between & (infinity) and pole.
- iii. Concave lens object at infinity.
- iv. for Bi-convex lens object of "C"

13. Give any commonly used bases and their uses?

14. What happens to light ray strikes to concave mirror through center of curvature and what is the reason it, Explain.

IV. Answer all the following questions.

3 x 8 = 24m

15. A. i. Why do stars twinkle and why do the planets not twinkle.
ii. Define ciliary muscles.

(Or)

- B. i. Define the heating effect of current.
ii. An electric bulb with a 60W rating operates for 10 hours and fan of 100W can run for 5 hours. Then total units consumed for month?

16. A. Explain the following

- a. Homologous series.
b. Substitution reactions.

(Or)

- B. An alkali is an important base used for the laboratory work. Name the base and state how it can be prepared from common salt. What is this process called?

17. A. Conduct an activity to explain the "Electrolysis of water."

(Or)

- C. Describe an activity to show that the direction of a magnetic field due to a current carrying straight conductor depends upon the direction of the current flowing through it.
